

PROCESS FLOWCHART SEQUENCE

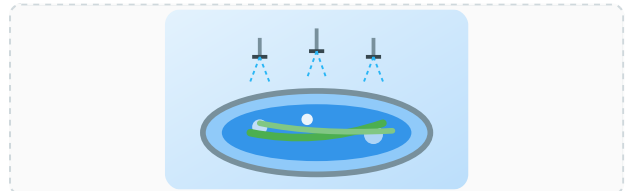

STEP-BY-STEP PRODUCTION SPECIFICATIONS

01 RAW MATERIAL SELECTION

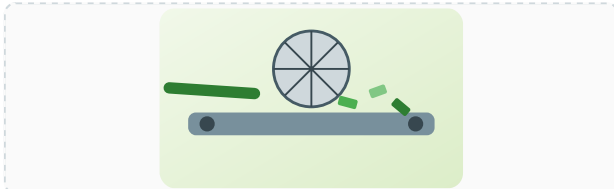

Fresh, healthy lemongrass stalks (*Cymbopogon flexuosus*) are carefully selected & harvested from trusted certified farms.

02 CLEANING & WASHING

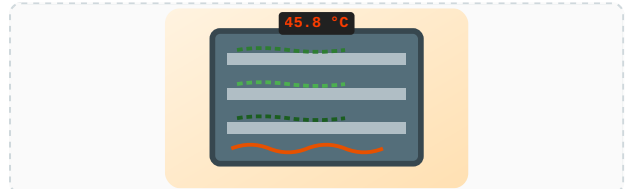

Harvested lemongrass is cleaned thoroughly in running pure water to perfectly remove all residual dust, dirt, and impurities.

03 SLICING & CHOPPING

Cleaned lemongrass stalks are uniformly sliced into small pieces to increase surface area for an efficient, accelerated drying cycle.

04 CONTROLLED DRYING

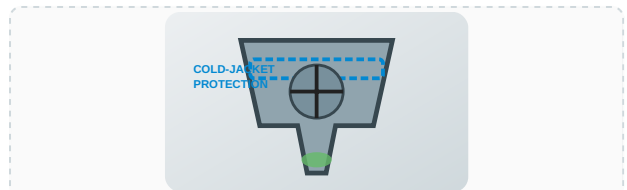

Slices undergo multi-stage low temperature hot air drying (45°C - 50°C) to lock in natural green color, essential oils, and original aroma.

05 MOISTURE CHECKING

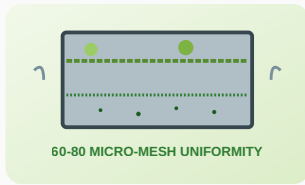

Dehydrated herb batches are verified with high-precision digital analyzers to guarantee moisture content remains strictly below 7%.

06 PULVERIZING & MILLING

Dried segments pass through stainless steel ultra-fine pulverizers with cold-milling specs to prevent heat-degradation of active ingredients.

07 SIFTING & GRADING

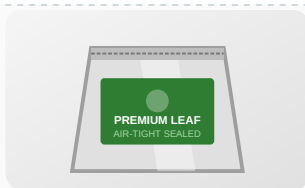

Ground material moves through specialized 60-80 micro-mesh sifter structures to extract dense fibrous materials, creating a fine uniform powder.

08 QUALITY ASSURANCE

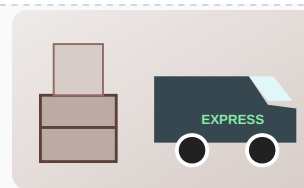

Batches undergo complete testing criteria matching export guidelines for Active Citral parameters, uniform micro levels, and zero heavy elements.

09 HYGIENIC PACKING

The fine green powder is securely sealed in protective food-grade moisture-proof aluminum bags or air-tight drum linings to lock in active fresh aroma.

10 STORAGE & DISPATCH

Milled powder stands structured in a dry, ventilated, temperature-stable warehouse, ready to move through express logistics for international delivery.

OUR BRAND COMMITMENT

- 100% Pure & Organic
- Cold-Milled Process
- No Synthetic Chemicals
- Therapeutic Grade Quality
- High-Yield Eco Operations
